Projects

x86-64 Emulator

C++20, CMake

- Building a from-scratch x86-64 emulator and debugger covering instruction semantics, machine-code decoding, ELF loading, virtual memory, and syscalls
- Implemented CPU state and flag-correctness (CF/PF/AF/ZF/SF/OF) verified against native hardware with a dependency-free unit-test suite

Compartmental Human Metabolic Model

Python

- Built an hour-by-hour, ten-subsystem simulation of human metabolism responding to diet and exercise inputs
- Enforced strict double-entry mass and energy conservation across every organ compartment and environmental sink

Garmin Field Log

Python, GitHub Actions

- Shipped a serverless fitness dashboard: a scheduled GitHub Actions job pulls Garmin Connect data daily and a static GitHub Pages frontend renders it

Skills

Languages C, C++, Python, x86-64 Assembly, SQL

Tools Git, CMake, Linux, MySQL, GitHub Actions, Pandas
